

WaterMarc

Location	Greensborough, VIC
Product	Fabric Duct
Scale	500 linear metres
Client	Banyule City Council
Mech. Engineer	Waterman AHW
Completed	2012

WaterMarc is one of the largest aquatic and leisure facilities Victoria. It was designed by Peddle Thorp Architects, who wanted to make use of colourful fabric ducts to act as a striking design feature.

The consulting engineer specified FabricAir fabric duct for three primary reasons; the non-corrosive nature of the product, the fact that condensation on walls and glazing can be mitigated by precisely-directed air dispersion, and the need to carefully predict and control air velocities to avoid excessive pool-water evaporation and uncomfortable draughts.

Additional benefits include the simple and fast installation method, and the fact that ducts can be easily removed, cleaned and replaced where necessary.

The trusted Australian supplier of innovative HVAC solutions
